Humpback Whale Research - objective of the research activity is to understand the critical biological parameters, life history, distribution, and other critical factors affecting the survival of this endangered species. To implement and educate the general public and decision-makers who can implement the necessary measures to ensure this species survival.

2014 (fiscal year 2013) marked the 39th consecutive year of this continuing research project. The State of Hawaii, using our expert testimony, has dedicated the four island region of Maui County (Maui, Lanai, Molokai, and Kahoolawe) as a thrillcraft and parasail free zone during the winter "Whale Season", from December 15th of each year, through May 15th. This designation ensures the critical habitat within this area from this type of human disturbance. With help from the Center's research scientists, the designation of the Hawaiian Island Humpback Whale National Marine Sanctuary furthers this endangered species' protection.

Scientists from the Center continued to support the National Marine Mammal Laboratory's central fluke identification depository at NOAA's headquarters in Seattle, Washington. Using the Center's collection of fluke photographs of mothers and calves, the working group has continued the organization and analysis of each research team's photo set, with the Center's. The goal of the working group is to begin to better understand the rate of survivorship of the endangered humpback's calves. A report has followed, and a scientific paper has been published.

The critically acclaimed IMAX film "WHALES" has reached millions of people to date. This film featuring the Center's researchers, further expands the Center's educational efforts. In 2009, the BBC produced the "Natures Great Events: The Great Feast" which the Center's research team helped produce.

During the 2014-study period, we have continued to focus our research conducting data analysis on identifying individual humpback whales by both tail fluke and body pattern identification. We documented humpback whale behavior from both above and below the surface of the water, determining the sex and social roles of individual whales. We compiled resighting histories of known individuals, determined calving intervals of known females, and recorded the distribution of mothers and calves.
